Episode 5: How can I teach online effectively?

Show notes
Episode overview

The last two years have seen a rush to teaching online, driven largely by the COVID-19 pandemic. But whilst some teachers had considerable experience teaching remotely, for others it was a completely new experience. In episode 5, we learn from Plan Ceibal (Ceibal en Inglés), an innovative English teaching project which uses videoconferencing technology to reach 80,000 children in over 550 primary schools across Uruguay. In the second part, digital learning specialist and lecturer in English language teacher Raquel Ribeiro shares her insights into how you can teach online more effectively, whatever your own experience and personal context.

In this episode

I believe that remote teaching can be possible in low resource contexts. I think that the pandemic showed us that this was possible.

Remote teaching is as effective as face-to-face teaching.

If there is one thing we have all learned is that there is no ideal scenario for anything.

So instead of having everything on the screen, and projecting and preparing PowerPoints that are amazing, it's more productive and cognitively more challenging that the students get to copy the questions for a conversation.

There is a natural curve of learning for dealing with technology.

When done well, online teaching can be an effective way to teach language, and it can help to reduce inequality in the classroom.

There is learning even in failure.
Classroom application

Think about how you could use the ideas in this episode in your own teaching.

Think about your own practice

- Are there any aspects of Ceibal en Inglés which you could integrate into your own online teaching?
- Are there ways that you could include your students more in the organisation and management of your online teaching?
- To what extent do you integrate ‘offline’ activities into your online teaching? Is there more that you could do?
- Are there any external tools (e.g. Google Classroom) which you could use in your online teaching?

Raquel’s advice

Ten More Tips for Teaching Online

Extract from Teaching in Challenging Circumstances (2021) by Chris Sowton

1. Ensure that whatever approach or system you use, it should be as inclusive as possible and there should be digital equity. Make sure as many students as possible have the opportunity to access the materials.

2. Teaching online is tiring. Teachers can mistakenly think that online teaching is easier than teaching face to face. Ensure that you take breaks between sessions, and also that you don’t set your expectations too high.
3. Don’t use too many platforms, programs / apps, or websites. Use a small number of good ones which both you and your students are comfortable with.

4. Synchronous sessions should not be directly sequential – i.e. each session should be standalone. Students should still be able to learn something and participate effectively even if they missed previous sessions. This may not be an issue if you are able to record synchronous sessions, which students can watch or listen to later in their own time.

5. Synchronous sessions should be interactive and contain a wider range of different tasks and activities – just like a classroom lesson. They should not just be lectures. Students should do tasks in real time, either by themselves or with partners. On some online platforms, students may be able to work in their own online groups (e.g. ‘breakout rooms’ in online conferencing services), which you can drop into. If this is not possible, students may be able to communicate directly with each other through an instant messaging app or speak on another device.

6. Synchronous sessions can also have an offline component, to allow students to have a break from the screen. You could set short tasks such as:
   - Practise the language that you have just learned with a family member
   - Write a summary in your book
   - Read a story in the textbook
   - Draw a picture for the next activity

7. When running synchronous sessions, you should be in control of the audio. You need to be able to mute people, otherwise lots of people may be speaking at once (which may be confusing), and some students may be in very loud locations where there is a lot of ambient noise (which makes it difficult for others to hear). However, let students decide if they want to use their video or not. That should be their decision. If the bandwidth is okay, it’s better if you can use the video for yourself so they can all see and hear you.

8. If you use an open link, be careful about people from outside joining in. As a safety measure, where possible, do not put the session link on an open platform (e.g. in a social media post), but rather send it directly to participants, e.g. via email or instant message, or tell them face to face, if this is possible.

9. If providing asynchronous materials, it should not just be an ‘information dump’. Think carefully about what materials you want students to use, and how they are going to use them. Think quality, not quantity.

10. When teaching online, it’s important not to forget the human element – you need to humanize online teaching. You are still their teacher, and need to show interest, kindness and understanding; you are not a speaking avatar. Be flexible and patient, and appreciate the difficulties which your students might be experiencing in their daily lives.

<td>Connectivity</td>
<td>A generic term for connecting devices to each other in order to transfer data back and forth.</td>
</tr>
<tr>
<td>Remote teaching</td>
<td>Remote teaching occurs outside of a physical classroom. Instructors are separated from their learners in time and distance. Remote teaching is typically facilitated through technology, such as video conferencing software, discussion boards or learning management systems. This type of teaching may be synchronous, where students watch instructors deliver their lectures live, or asynchronous, where students watch lecture recordings at a later point in time.</td>
